#### **DETAILED ACTION**

1. This Office Action is in response to applicant's amendment filed on October 28. 2005.

#### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1,2,6, and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by US Pat No 4,563,886 to Kletzmaier et al (Kletzmaier).

Regarding claims 1 and 14, Kletzmaier discloses a safety lock an actuating unit and a locking unit. The actuating unit (4) comprises an actuator (5 and 6) that is guided in a displaceable manner and pushable into the locking unit (8). The actuator is lockable therein via an electromagnetically actuable, pivotable catch (30), by way of interengaging engagement surfaces (Figures 4-7). The actuator further comprises a trigger element (the tip of element 5).

The locking unit (8) comprises a response element (15), which, with the actuator pushed in, reacts to the trigger element by emitting an electric signal, which triggers the locking action, wherein the catch is pivotable about an axis extending parallel to the movement direction of the actuator, and wherein the engagement surfaces of the catch and of the actuator run perpendicularly to the movement direction. The

Art Unit: 3676

engagement surfaces of the catch are provided on a lateral side of the catch in the direction of its latching pivotization (see attachment #1).

As to claim 2, Kletzmaier discloses that the actuator is latchable in a predetermined position in the locking unit by a latching device (the tip of 30).

As to claim 6, Kletzmaier illustrates that the engagement-surface arrangement of the catch is mirror-symmetrical in a direction perpendicular to the movement direction of the actuator.

#### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat No 4,563,886 to Kletzmaier et al (Kletzmaier) as applied to claim 1 above, and further in view of EP 134,317 to Cahill.

As to claim 5, Kletzmaier fails to disclose that the engagement surfaces of the catch and of the actuator comprise complementary grooves and ribs. Kletzmaier discloses that the engagement surfaces of the catch and of the actuator comprise a complementary groove (at the actuator) and a rib (the end of 30).

Cahill teaches that it is well known in the art to have engagement surfaces of a catch (10) and an actuator (1) that comprises complementary grooves (11) and ribs (9).

Art Unit: 3676

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the lock described by Kletzmaier with a plurality of grooves and ribs, as taught by Cahill, in order to fixedly secure the actuator with respect to the catch.

6. Claims 7 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat No 4,563,886 to Kletzmaier et al (Kletzmaier) as applied to claim 1 above, and further in view of US Pat No 5,690,373 to Luker.

As to claim 7, Kletzmaier fails to disclose that the locking device has a housing that has openings for fastening screws.

Luker teaches that it is well known in the art to have a locking unit enclosed inside a housing that includes openings to receive fastening screws (Figure 1).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the locking unit described by Kletzmaier with a housing, as taught by Luker, in order to enclose and secure the locking unit from any damage.

As to claim 11, Luker teaches that the locking unit has a housing that comprises a slot (2) that is intended for introduction of the actuator with a height that is greater than the height of the actuator (3).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the lock described by Kletzmaier with a housing that includes a slot to receive the actuator, as taught by Luker, in order to receive and secure the actuator.

Art Unit: 3676

7. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat No 4,563,886 to Kletzmaier et al (Kletzmaier) in view of US Pat No 5,690,373 to Luker as applied to claim 7 above, and further in view of US Pat No 4,613,176 to Kelly.

Kletzmaier, as modified by Luker, fails to disclose that the accommodating openings are slots. Kletzmaier, as modified by Luker teaches that the accommodating openings are apertures.

Kelly teaches that it is well known in the art to have accommodating openings that are slots (36) to receive screws in order to install a housing (35).

It would have been obvious to one having ordinary skill in the art to provide the lock housing described by Kletzmaier, as modified by Luker, with slots, as taught by Kelly, in order to be able of accommodate the housing in different positions.

8. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat No 4,563,886 to Kletzmaier et al (Kletzmaier) as applied to claim 1 above, and further in view of US Pat No 1,215,286 to Kollmeyer.

Kletzmaier fails to disclose that the actuator unit has a housing that can be fitted such that it can be adjusted in position in relation to the locking unit.

Kollmeyer teaches that it is known in the art to have an actuator unit (3) having a housing that is capable of being adjusted in position in relation to the locking unit (by means of the screw connection 6).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the locking unit described by Kletzmaier with an adjustable actuator unit housing, as taught by Kollmeyer, in order to enclose and

secure the actuator unit from any damage and to position it in a desire position with respect to the locking unit.

9. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat No 4,563,886 to Kletzmaier et al (Kletzmaier) in view of US Pat No 5,690,373 to Luker as applied to claim 11 above, and further in view of US Pat No 1,215,286 to Kollmeyer.

Kletzmaier, as modified by Luker, fails to disclose that the locking unit has a housing that has openings so as to allow he introduction of the actuator. Kletzmaier, as modified by Luker, teaches a housing that includes only one opening.

Kollmeyer teaches that it is known in the art to have a locking unit (4) having a housing that includes two openings so as to introduce an actuator (7) threrethrough.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the locking unit housing described by Kletzmaier, as modified by Luker, with an adjustable actuator unit housing, as taught by Kollmeyer, in order to enclose and secure the actuator.

### Allowable Subject Matter

10. Claims 3 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 4 would also be allowed because the claim depends from claim 3.

## Response to Arguments

11. Applicant's arguments filed on October 28, 2005 have been fully considered but they are not persuasive.

Art Unit: 3676

The applicant argues that Kletzmaier fails to disclose the new limitation presented in claim 1 that the engagement surfaces of the catch are provided on a lateral side of the catch in the direction of its latching pivotization. However, as seen in attachment #1, Kletzmaier clearly illustrates that the engagement surfaces of the catch are provided on a lateral side of the catch in the direction of its latching pivotization. Therefore, the argument is not persuasive and the rejection is maintained.

#### Conclusion

12. Applicant's amendment, that the engagement surfaces of the catch are provided on a lateral side of the catch in the direction of its latching pivotization as claimed in cliam 1, necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
